                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Rather P.N., Solinsky K.A., Paradise M.R., Parojcic M.M.;

"aarC, an essential gene involved in density-dependent regulation of
the 2'-N-acetyltransferase in providencia stuartii.";

J. Bacteriol. 179:2267-227311997).

-I- FUNCTION: Converts 2C-methyl-D-erythritol 2,4-cyclodiphosphate
(ME-2,4cPP) into 1-hydroxy-2-methyl-2-(E)-butenyl 4-diphosphate
(By similarity). Involved in density-dependent regulation of 2'-N-
acetyltransferase.

-I- PANHWAY: Nonmevalonate terpenoid biosynthesis pathway; sixth step.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                               /clone_lib-"potato microtubers, in vitro-grown"
/clone_lib-"potato microtubers, in vitro-grown"
/note-"vector: pBluescript SK(-); Site_1: EcoRI; Site_2:
XhoI; Tissue supplied by Christian Bachem and Richard
Visser (Department of Plant Breeding, Wageningen
University, The Netherlands); sequencing by The Institute
for Genomic Research. The cSTA libraries will attempt to
capture the induction and initiation/initial growth of the
tuber in an in vitro system as described in Bachem et al.
(Plant Journal, 1996). Small microtubers develop from
axillary buds attached to stem explants when placed on a
high sucrose medium (10%). Visible morphological changes
occur synchronously at day five in the axillary buds. The
first library, cSTA (1-20) consists of axillary buds
harvested on days 1-3. This targets those genes involved
in induction of the microtubers. The following libraries,
cSTA (21-40) and cSTA (41-60), capture genes involved in
tuber initiation and outgrowth. This library is noted as
p3 in Tanksley lab notebooks."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Robin Buell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /tissue_type="axillary buds of stem explants; growing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /note="Vector: pBluescript SK(+) vector DNA, phagemid excised from lambda ZAP; Site_1: EcoR V; Site_2: EcoR V; Host leukocytes were extracted from P. vivax infected blood using the following methods: first, infected blood using the following methods: first, infected blood was activated by the addition of 0.5 ml of ADP (40mg/ml) per 10 ml blood. Then blood was passed over a column of acid washed 0.1 mm glass beads, then through a plasmodipur filter, followed by passage through a column of pre-wet whatman CF11 powder (1:2 ratio volume of blood to CF11), and finally centrifuged through a 50% percoll density cushion. Purified DNA was digested with mung bean nuclease in the presence of 44% fornamide at 50c2 as described (Vernick, K.D., Imberski, R.B., and McCutchan, T.F. 1988. blunt-ended using T4 DNA Polymerase and size fractionated over a Sepharose CL-2B column. Fractions in the size range 500bp-4kb were ligated into the Eco RV site of pBluescript ligation mixture."

//clone="Yector: pBluescript SK+; Site_1: EcoRI (5'-end of //clone); Site_2: XhoI (3'-end of cDNA); pericarp 0-7

DAP(days after pollination). Due to a cloning artefact caused by the kit, in most cases the EcoRI site is NOT present, as well as the EcoRIAdapter used for cloning. To excise the insert, restriction sites upstream EcoRI should excise the insert, restriction sites upstream EcoRI should be used (e.g. BamHI, Sall, Pstl). NOTE: Also due to the cloning system used Blue/white selection for recombinats is not 100% reliable.Average insert size is 900 bp"
